

Sergey Petrosyan

Software Engineer — Enterprise Frontend Architecture · React & TypeScript · AI-Native Development

Yerevan, Armenia | petrosyanserg33@gmail.com | linkedin.com/in/petrosyanserg | github.com/petrosyanSerg | t.me/sergoDeveloper

PROFESSIONAL SUMMARY

Software engineer with four years building web applications, three of them commercial, currently owning the frontend architecture of an enterprise leasing and credit management platform in the Armenian banking sector. Works where correctness is not negotiable: role-based authorization, auditable credit workflows, and business logic that has to hold up under regulatory scrutiny.

Builds with AI-native workflows as professional practice rather than experiment — agentic development with Claude Code, project-aware scaffolding, spec-driven implementation, and human-in-the-loop validation that keeps generated code inside the project's architecture and business rules. Comfortable owning a domain end to end: architecture, complex forms and data tables, API integration, internationalization, accessibility and developer experience.

CORE EXPERTISE

Enterprise frontend architecture	Feature-Sliced Design	React 19 & TypeScript at scale	AI-native & agentic engineering
Type-safe authorization	Complex domain UI & forms	Design systems & theming	Internationalization
Developer experience & CI			

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES2023+), HTML5, SCSS/CSS
Frameworks	React 19, React Router, Redux Toolkit, TanStack Query, React Hook Form, Zod, i18next, nuqs, Ant Design, Material UI, Next.js
Architecture	Feature-Sliced Design, modular frontend architecture, design systems, multi-theme theming, PWA, mobile-first UI
API & data	REST integration, Axios, JWT authentication with automatic token refresh, OpenAPI / Swagger-driven clients
Tooling	Vite, ESLint, Prettier, PostCSS, Git / GitFlow, npm
Infrastructure	Docker, GitHub Actions, Azure
AI engineering	Claude Code, specialized agents, project-aware scaffolding, context engineering, spec-driven development, human-in-the-loop review, Figma / Jira / Swagger integrations
Design	Figma, Adobe Photoshop, Adobe Lightroom

PROFESSIONAL EXPERIENCE

Software Engineer — ActualSolutions Feb 2026 — Present

Yerevan, Armenia · Full-time, Hybrid — custom CRM and lending software for the banking sector

- Frontend architect and engineer for **MK Kredit**, an enterprise leasing and credit management platform.
- Built and evolved a **React 19 + TypeScript** application from a greenfield codebase into roughly **50 business modules** covering the complete leasing lifecycle — application analysis, credit history, collateral, income and expenses, cash flow, credit committee approval, conclusions and disbursement.
- Architected the codebase around **Feature-Sliced Design** with enforced module boundaries and **automated CI quality gates**, so the application stays navigable as the domain expands.
- Designed **type-safe authorization**, a centralized API layer and a unified error-handling architecture, plus reusable form and data-table systems that most business modules are composed from.
- Integrated **36 domain API services spanning 190+ endpoints** with JWT authentication and automatic token refresh.
- Delivered mobile-first responsive UI, **PWA** capabilities, a multi-theme design system, user personalization and **Armenian-first internationalization**.
- Applied **AI-first and agentic development** across requirements, architecture, implementation, refactoring, documentation and code review using Claude Code, specialized agents, project-aware scaffolding and Figma / Jira / Swagger integrations.
- Established **context engineering, spec-driven development and human-in-the-loop validation** so AI-generated code conforms to project architecture, business rules and engineering standards rather than merely compiling.

React 19 · TypeScript · Vite · TanStack Query · Redux Toolkit · React Hook Form · Zod · Ant Design · SCSS · Axios · i18next · Docker · GitHub Actions · Azure · Claude Code

Software Engineer — [SoftConstruct](#)

Jun 2023 — Nov 2025

Yerevan, Armenia · Full-time, On-site — 2 yrs 6 mos on the SpringBME platform

- Implemented new functional modules and UI components with scalability and responsive behaviour as first-class constraints.
- Optimized images and frontend assets, improving page load performance across the platform.
- Refactored existing code and styling to raise readability, maintainability and visual consistency.
- Authored detailed user guides that helped end users and internal teams adopt new features.
- Collaborated with cross-functional teams through sprint planning, code review and architecture discussion.

React · Redux Toolkit · SCSS · React Hook Form · GitFlow

Frontend Developer — [SmartCode](#)

Sep 2022 — May 2023

Yerevan, Armenia · Internship, On-site

- Built user dashboard filtering functionality and contributed React components to an existing application.
- Refactored an API data-fetching module to reduce duplication and improve response handling.
- Worked to team standards for Git workflow, code review and delivery.

React · JavaScript · HTML5 · CSS · Git/GitHub

Graphic Designer — [EdEl Photostudio](#)

Jul 2019 — May 2020

Hrazdan, Armenia · Full-time, On-site

- Handled colour correction and grading across portrait, product and event photography.
- Streamlined the workflow between shoot, edit and delivery, reducing client turnaround time.
- Carried out image restoration and cleanup on complex source material.

Adobe Photoshop · Adobe Lightroom

SELECTED PROJECTS

MK Kredit — Enterprise leasing & credit platform [ActualSolutions](#) · 2026–present

Greenfield React 19 + TypeScript frontend for the full leasing lifecycle: ~50 business modules, Feature-Sliced Design, 36 API services across 190+ endpoints, PWA, multi-theme design system, Armenian-first i18n. Production, access restricted.

AI-native development workflow [ActualSolutions](#) · 2026–present

An internal engineering workflow built on Claude Code — specialized agents, project-aware scaffolding and Figma / Jira / Swagger integrations — with spec-driven development and human-in-the-loop review gates that keep generated code aligned to architecture and business rules.

Feature-Sliced Design reference build [Personal](#) · 2025 · [github.com/petrosyanSerg/FSD_Test](#)

React + TypeScript + Vite application structured with Feature-Sliced Design and the React Compiler, used to validate layer boundaries and scaling patterns before applying them at enterprise scale.

Next.js routing, SSR & SSG study [Personal](#) · 2023 · [github.com/petrosyanSerg/Project_NextJS_TypeScript](#)

TypeScript Next.js application exploring routing strategies and the trade-offs between server-side rendering and static generation.

EDUCATION & CERTIFICATIONS

Yerevan State College of Informatics (YSCI)

Computer Software Engineering · Sep 2017 – Jun 2023

SmartCode — Front End Developer programme

Aug 2022 – May 2023 · Yerevan, Armenia

Software Engineer

Yerevan State College of Informatics · Jun 2023

Front-End Engineer

SmartCode · May 2023

Sololearn: JavaScript, React/Redux, CSS, HTML · 2023

LANGUAGES & ADDITIONAL INFORMATION

Armenian — Native / bilingual

Russian — Full professional

English — Elementary

Open to **on-site, hybrid and remote** roles; based in Yerevan, Armenia.

Domain focus: **regulated financial software** — leasing, credit and lending workflows.

Two years of professional graphic design work preceding engineering.
